

Cisco MGN and Assessment Tool

Partial Presentation

Cisco® Medical-Grade Network and Assessment Tool

Streamlining Access to Medical Information

- **Challenge:** improve patient care through rapid access to information
- **Solution:** adopt advanced medical applications and systems
- **Enabler:** an integrated technology infrastructure

Cisco Medical-Grade Network Solution Overview

- Defines an optimally performing healthcare network based on *resilience*, *protection*, *responsiveness*, and *interaction*

MGN: The Resilient and Protected Network

- **Optimizes the availability and transmission of vital information**
- **Resilient network**
 - Available and converged to ensure maximum uptime**
 - Integrates voice, video, and data into one network**
- **Protected Network: Provides fully embedded network-wide security**

Benefits of the MGN: Improved Patient Care

- **Faster test results & treatment**
- **Timely, accurate results and protection**
- **Improved patient experience by cutting wait times**
- **Facilitates greater knowledge sharing**
- **Increased focus on patients**

MGN Success Story I: Exempla Healthcare

Cisco's solution

- Installed Medical-Grade Network linking hospitals, offices, and clinics
- Implemented intrusion detection, firewall, and VPN solutions
- Provided PoE, wireless, and IP telephony

Benefits:

- Reduced Exempla's project costs through PoE
- Ensured five-nines network availability
- Saved time, reduced education costs, and increased productivity

Summary

Does your advanced technology match your business objectives?

- **You need a scalable, comprehensive Medical-Grade Network**
- **Improve quality of patient care and lower costs**
